PROJETOS

Finn - [github](#) / [playstore](#)

Social media based on communities and posts.

- Developed in Java
- Following the MVVM architecture and using LiveData
- Integration with Firebase Authentication (Facebook and Google authentication options)
- Dependency Injection with Dagger Hilt
- Using Retrofit to make API calls along with RxJava for asynchronous data processing

AmazingNote - [github](#) / [playstore](#)

Note taking application

- Developed in Kotlin
- Using RoomDB to store the notes locally as well as coroutines to perform the database operations asynchronously
- Following the MVVM architecture and using LiveData too.
- Dependency Injection with Dagger Hilt, which is fundamental in order to build tests
- Following TDD practices. I used JUnit4, Mockito, and Espresso to build Unit, Integration, and UI tests

SKILLS

- Java and Kotlin for Android
- MVVM, MVP, MVC architectures
- Android Jetpack Components
- TDD using Junit and Espresso
- Code versioning using Git
- Experience in Backend development using Typescript and Node.js (Express)
- PostgreSQL, SQLite and MongoDB databases

EDUCATIONAL HISTORY

Universidade Federal Rural do Rio de Janeiro

Bachelor of Computer Science (Finishing date: Jun/2023)

LANGUAGES

- Portuguese (Native)
- English
- Spanish
- German (B1)
